

Product Development Technologist

- **Iconic Food Manufacturing Business in Growth Mode**
- **Mt Wellington, Auckland**
- **New Product Development in a Great Team Environment**

At Delmaine our Philosophy is simple. Everyone has the right to great food and everyone has the right to a great career.

We have made it our mission in this New Zealand owned business to offer some of the best working conditions and employee benefits around. In addition there are growth opportunities to enable your career progression. Sound good? There's more.

Delmaine manufactures a wide range of food products across a number of processing lines so there is variety and challenge in every day.

You will have access to discounts on Delmaine products and get to work in our fantastic Mt Wellington location with an abundance of parking space.

Right now, we are hiring a Product Development Technologist to be an integral part of our Research & Development Team.

So, what exactly does this role entail?

In this role you'll be working with the Industrial Sales and Production Teams to develop customised food products for our local and international customers.

You will enjoy the full NPD cycle, from concept to commercialisation and everything in between. You will be able to indulge your creativity and love of food as part of an R&D team tasked with meeting the increasing demand of Delmaine's discerning customer and consumer base. This role;

- Takes project responsibility for all technical elements of the NPD process, including bench top trial and factory trial work.
- Is across global market trends in terms of products, flavour and texture to ensure the business is always one step ahead of its competitors.
- Works closely with suppliers to ensure you are up to speed with new ingredients and trends.

Skills and experience

Your creative flare, ability to demonstrate excellent communication, both verbal and written, across all levels, exceptional relationship skills, sound knowledge of food regulations, as well as a strong team player to fit into a hard working yet fun team environment will set you up for success in this dynamic company.

What you'll need:

- To have a food technology tertiary qualification
- Proven creative development experience with at least 3+ years ideally in a similar complex food manufacturing facility
- An excellent understanding of HACCP, GMP and Food Safety requirements
- Experience in continuous improvement and problem solving
- A passion for top-quality product with a strong customer and business focus
